

Using Attachment Sources

Advanced Scripting Series

March 24, 2021

Agenda

- Introduction
- Overview
- Scenario Examples
- Summary

Introduction

Why use the Attachment Source mechanism?

- This is mainly due to the convenience and maintenance capabilities compared to the "hard association" mechanism.
- Dynamic Images - display a different image for each language/Answer/Iteration.
- Tracker Projects - When changes are expected to that attachment list through the project's lifecycle or when the brand's list is taken from a Subject Store/ External list.

Please Note:

- Each image you'll add to the attachment source will be displayed for each Answer/Topic, according to the order you added in.

Overview

We will focus on 3 Scenarios.

- Creating an Attachment Source, when each brand should display an image using Excel.
Note: We will demonstrate how to use Excel to build the actual Attachment Source (Excel functions), and we will share the Excel Template with you.
- Dynamically Display Images according to a specific Answer/Language.
- Use the Attachment Source in a Loop Question/Compound Grid.

Notes

- **CAPI ONLY** - Please note that Attachments sizes vary and in some cases might be very big which will affect the download to the devices.
We limit each survey to 450MB as we want to prevent long downloading time.
Therefore, if the attachments size is greater than 450MB, the attachments should be stored on the device itself.
Please refer to the following guide : <https://support.dooblo.net/hc/en-us/articles/208295195-How-to-Display-Media-Files-Stored-On-Your-Android-Device>
- If you wish to know how you can capture images during the interview and display them later in the survey itself, please refer to the following guide:
<https://support.dooblo.net/hc/en-us/articles/208296375-How-To-Display-Captured-Images-Dynamically>

Q&A

Thank You!
